Abstract (en)

[origin: EP1731460A1] The cylindrical body (10) has a number of first conical elements (12a-g) that interact with and are axially movable with respect to a number of second conical elements (22a-g). The diameter of the body is varied depending on the axial movement between the first and second conical elements, which define the outer surface of the cylindrical body. Independent claims are also included for the following: a method of varying the effective diameter of a cylindrical body and a printing machine, especially a roller rotation printer.
