Abstract (en)
[origin: EP1732044A1] An inserted bundle of paper currency is carried while being clamped by moving the clamp toward a carrying belt. The clamp is moved by transmitting a power to two arms. The power transmitted to one arm is further transmitted to the other arm through a link. The link is provided with a plurality of slits and a plurality of sensors for detecting the slits are provided. A decision is made whether the height of a pressed bundle of paper currency is acceptable or not by utilizing a variation in positional relation between the slit and the sensor incident to movement of the clamp.
