Abstract (en)

[origin: EP1732051A1] Traffic lights (14,16) are each set up at a crossroads to be monitored. The lights and stop lines (18,20) assigned to the lights each lie within the visual range of a device (10) for monitoring, especially red-light monitoring, of a street location controlled by lights, especially a crossroads or a road junction. Independent claims are also included for the following: (1) A computer program with program code devices to carry out the method of the present invention; (2) A computer program product with program code devices stored on a computer-readable data carrier; (3) A device for monitoring, especially red-light monitoring, of a street location controlled by lights, especially a crossroads or a road junction.
