Abstract (en)

[origin: FR2886757A1] The device has a module (21) with a tilting unit (210), and an actuation mechanism (3) with a second or third type control lever (31) to actuate the unit (210). The mechanism has a third type shift lever (33) forming a kinematic connection between the lever (31) and the unit (210). The lever (31) has a support zone (310) selectively supporting on the lever (33) which has a support zone (330) supporting selectively on the unit (210), so that the lever (31) has an angular displacement lower than the tilting that it transmits to the unit (210).
