Abstract (en)

[origin: US2008245204A1] Devices are known for crosscutting webs of paper or cardboard, which include a crosscutting device having two blade drums, which are provided with cross blades. Arranged behind the crosscutting device is a sheet transport device, which includes a braking device having a brake roller. To avoid markings on sheets of delicate paper or cardboard types, the brake roller of the present invention is comprised of a cylindrical base body, on which, at a peripheral distance from one another, radially extending ribs made of a elastic material are mounted, which terminate in a cylindrical enveloping surface, which is coaxial in relation to the base body.
