Abstract (en)
[origin: WO2005093338A2] The invention relates to a refrigeration device comprising at least two storage compartments (2, 3) that are thermally insulated from one another and from the environment. In said device, an evaporator (8, 9) that can be cooled independently of an evaporator (9, 8) of the other storage compartment or compartments (3, 2), is allocated to each storage compartment (2, 3). Said device is equipped with elements (14, 15, 16, 17) for switching at least one of the compartments (2, 3) from a freezing mode to a non-freezing mode.
