Abstract (en)

[origin: WO2005101240A1] The invention concerns a method for finding data in documents stored in an electronic memory comprising the following steps: selecting at least one document among the stored documents, based on a request including at least one predetermined character string; extracting a result for display in the form of a summary of data concerning the selected document; and prior to the steps of selection and extraction, generating a table representing the stored documents, comprising a character string including at least part of the data of the stored documents. During the extraction step, a result is generated using the representation table, based on data contained in the character string of the representation table considered relevant in accordance with the request.
