Abstract (en)  
[origin: EP1733668A1] An electric vacuum cleaner includes a vacuum cleaner body (11) in which a connection port communicating with a suction inlet is formed and a dust-collecting case chamber (21) communicated with the connecting port is formed, a dust-collecting case, which is detachably installed into the dust-collecting case chamber (21), has a suction port communicating with the connection port and accumulates dust sucked from the suction port, and an electric blower fan having a suction opening communicating with the dust-collecting case installed into the dust-collecting case chamber; a hole (41) that the dust-collecting case chamber (21) is communicated with the external air is provided, a button (42) is openably and closably provided in the hole (41), the button (42) closes the hole (41) when the dust-collecting case is installed into the dust-collecting case chamber (21), and when the dust-collecting case is not installed, the button (42) moves downward by the driving of the electric blower fan, and the hole (41) is opened not to suck dust due to the communication of the dust-collecting chamber with the external air.
