Abstract (en)

The package has a container (100) with an opening (105) and a wall (101) defining an inner cavity (102) to receive a product. A rim (108) extends around the wall, and a cover (200) closes the opening. A liner (300) arranged between the container and cover to form a sealed closure is separated from the cavity by a conical portion (111) of the container/cover when the container is closed by the cover. The container has a notch extending in a direction transversal to the liner when the container is closed, where the notch allows the insertion of a tool between the liner and the container/cover.
