Abstract (en)
The method involves laying out sheets on top of each other in a collecting station (8) and folding booklets in a transverse folding station. The sheets are connected with each other and the booklets are stuck into one another in another collecting station. Side edge and longitudinal cutting, folding, booklet and the latter collecting stations are deactivated based on format and/or composition of a newspaper in case-by-case manner. An independent claim is also included for a device for execution of a method of producing a newspaper.
