Abstract (en)
[origin: FR2886930A1] The flange has an arrangement provided for mounting a carrying handle of a spool, where the handle is articulated in a circular slot (4C') of the spool. The handle is pivoted in one direction in which it is embedded in the slot, in a utilization position, and in another direction in which it is stopped and projects from the slot, in a storage position. The handle is constituted of a semi-circularly shaped plate and comprises a side provided with slots distributed along the side. An independent claim is also included for a spool composed of a barrel and two flanges.
