Abstract (en)  
[origin: EP1734176A2] Crisscrossing interlinks warp threads (16) stretching generally towards the running direction of tape (L) as well as weft threads (20) stretching generally crosswise to the running direction of tape. Kept relative to each other by a structure of warp and weft threads, a weave is generated in a crosswise direction on the backing side (BS) of a fabric tape for each weft thread entered on the BS. An independent claim is also included for a method for producing.
