Abstract (en)

The panel (10) has edges with a groove (24) and a lug, where the groove cooperates with a corresponding lug (26') of an edge of another panel (10') to permit the coupling of the panels (10, 10') in an assembling plane. An abutment (32) of the panel (10) has a surface (34) in contact with the surface of a locking groove (36) of the panel (10'), so as to lock the panels. The panel (10') has ribbings (39°, 40°) whose free surface comprises a tack of 0.15 Newton/square millimeters. The ribbings come in contact directly with the material constituting the abutment. An independent claim is also included for a parquet flooring or floating floor comprising surface covering panel.
