Abstract (en)
The premix burner has a central cavity (8), into which premix air is fed through slots (11) in its walls. A central pipe (2) at the center of the cavity injects fuel for the main combustion into the burner, while pipes (14) above and below it on either side inject premix fuel (3) at right angles to the burner axis. An independent claim is included for a method for operating the burner.
