Abstract (en)

[origin: EP1734621A2] The arrangement has a hermetically sealed housing connected with a base plate. Connection units are arranged in a connection section of the plate, and a cover is provided for protection of the section. A line segment comprises a contact section (14) of the conducting paths which are formed on the connection units for formation of an electrical connection. The connection unit is pressed in a recess (17) of the contact section. An independent claim is also included for a method for connecting an electronic circuit in a housing.
