Abstract (en)
[origin: WO2005098344A1] Disclosed is a piece of cartridge blank ammunition comprising a projectile and a cartridge housing in which the projectile is received. Said projectile encompasses a monolithic central block (2) that is embodied as a cylinder and a monolithic cup-shaped projectile tip (5) which slides onto the central block (2) and locks into a circumferential locking groove (8) in the central block (2) by means of a circumferential locking lip (7). The cartridge shell (20) is embodied as a monolithic cup-shaped part, also slides onto the central block (2), and locks into a circumferential locking groove (23) of the central block (2) with the aid of a circumferential locking lip (22). A space (25) for receiving a propellant charge (28) and the ignition mechanism (29) thereof are provided in an approximately cylindrical protrusion (24) which extends centrally from the bottom of the cartridge shell (20) into the same. The inventive ammunition has a simple design and is inexpensive to produce as a result of the few simple parts required that can be made substantially of plastic without affecting the function thereof.
