Abstract (en)
[origin: WO2005100932A1] The inventive device consists of scaled vessels mounted on a vehicle and making it possible, while filling a liquid medium in the vessels, to recycle the vapours thereof through a circuit of casings beginning from the reading sights of the vessels and extending to an air-vent pipe provided with a removable valve, wherein the bottom of each vessel is embodied such that it is inclined and is followed by a valve, a transparent dropping reference unit and a second valve open into a common tube and ending by an ultimate valve.
