Abstract (en)
[origin: WO2005109120A1] The radio-controlled wristwatch comprises a memory unit (30) in which a table of more than four time signal transmitters (1 ... 10) from more than two time zones (A ... N) is stored. Attempts for receiving from the transmitters (1 ... 10) filed in the table are made by a control device (28), and upon a successful reception of a time signal transmitter (1 ... 10) from the table, the appurtenant time is displayed upon the display (32) of the wristwatch (20).
