Abstract (en)

[origin: WO2005098881A1] The invention relates to a winding for a transformer or a coil. Said winding is made of a winding material (11) comprising a strip-type electric conductor (10) which is connected in a detachable manner to at least one wide side (101) having at least one layer of insulating material (12). The winding material (11) is wound about a winding axis (16) in order to prevent axial offset in order to form the threads (20). The invention further relates to a method for the production of said type of winding.
