Abstract (en)

[origin: US2009140832A1] The invention relates to a safety device, in particular for ensuring protection of a loom of cables. The safety device comprises a strip fuse comprising at least two connection contacts. According to the invention, at least one connection piece is firmly arranged in an electrically conductive manner on at least one connection contact. The strip fuse and area of placement of the connection contacts and the connection piece are sealed at least in sections with the aid of an electrically insulating material. The protective device is embodied in a simple manner and can thus be produced economically.
