Abstract (en)
The invention relates to a relaxation chair with a seat, a back rest and a foot rest, wherein the seat and the back rest as well as the seat and the foot rest are pivotably connected to one another, and with a support with at least one foot, wherein the seat, back rest, foot rest and support co-operate in such a way that the relaxation chair can be moved by the user from an upright position with the foot rest retracted into a reclining position with the foot rest extended. Furthermore, the back rest is pivotably retained on the support and the seat is displaceably retained on the support. Furthermore between the foot rest and the support an actuating bar is provided which extends or retracts the foot rest when the seat is displaced relative to the support.
