Abstract (en)

An adjustable handle for a window or door is disclosed. The handle comprises at least one base (1), the or each base being adapted to be fastened to the window or door. The handle further comprises a grip (3), the grip having a longitudinal axis and being fixable to the or each base. The position of the grip with respect to the or each base is variable along the longitudinal axis. The handle further comprises fixing means (26,36) adapted to fix the grip to the or each base so as to prevent movement of the grip relative to the or each base along the longitudinal axis. A method of mounting a handle to a window or door is also disclosed. The method comprises the steps of mounting at least one base to a window or door, positioning a grip at an appropriate position with respect to the or each base along a longitudinal axis of the grip and fixing the grip to the or each base.
