Abstract (en)
The present invention relates to a glove compartment closing device comprising an actuation handle (1) linked to the cover of the glove compartment (7) according to a shaft (2) parallel to the opening, a fixed latch (3) located inside the glove compartment (7) and fixed to the body of the dashboard (8) and a locking hook (5) located inside the glove compartment. The hook (5) can swing between a locking position on the latch (3) and a releasing position by means of actuating the handle (1), said hook (5) being formed by a bent extension of the handle (1) directed towards the latch (3) and which can be coupled thereto in the locking position, whereas in the releasing position, said hook is located under the latch. A spring (6) continuously driving said handle (1) to the locking position is arranged between the handle and the cover of the glove compartment (7).
