Abstract (en)

[origin: WO2005094964A2] The invention relates to a method for attending to, filtrating and cleaning a working medium using at least one filter (2) in a filter housing (1) which adjoins a discharge device (4) for a filter cake. According to the invention, the filtered out particles are gradually compacted in the discharge device (4) to give the filter cake and the compacted filter cake is discharged once it has reached a predetermined thickness.
