Abstract (en)

[origin: WO2005056903A1] The invention relates to a method and a device for controlling the movement of a needle in a sewing machine (1) based on a detection device (27) that detects the movements of the visible top side of the article to be sewn (3) which is manually displaceable. Stitching of the sewing machine (1) is controlled by means of detected changes of position of the product to be sewn (3) in connection with preset stitch length. The detection device (27) can be fully or partly integrated in a sewing foot (23)
