Abstract (en)
[origin: WO2005085511A1] This invention relates to a load detection method which is used in washers (1), which enables the washer (1) to operate efficiently by detecting the weight of the laundry placed inside the drum, which determines the water, detergent and softener quantity and the washing program and/or period according to the type and weight of the laundry and at the same time the unbalanced load due to the distribution of the laundry inside drum (2) during spinning.
