Abstract (en)

[origin: WO2005098138A1] The invention relates to a machine (1) for transporting points (2), said machine comprising a points carrier (3) that can be supported on a track or a ballast bed, on the end thereof, by means of a rail or track-laying gear (7,8). Said points carrier (3) consists of a central carrier section (4) connected to winches, and two end carrier sections (6) that are mounted on the gear carrier (9) and are respectively connected to the central carrier section (4) in an articulated manner by means of a carrier joint (5). The two end carrier sections (6) can be pivoted about a gear axis (11) which is parallel to a carrier axis (30) of the carrier joint (5) and at a distance from the same, in relation to the gear carrier (9), by means of a rotational drive.
