Abstract (en)

[origin: WO2005108721A2] The invention relates to a key (10) comprising: a stem (14) which can be retracted into a case (12) and which is articulated to the case by means of a lug (18), angular locking means (22) for locking the stem (14) in the retracted position, and angular locking means (22) for locking the stem (14) in the deployed position. The invention is characterised in that the locking means comprise a single locking element (22) which is mounted such that it can move inside the case (12) and which co-operates directly with the lug (18) of the stem (14) in order to lock the stem (14) in the retracted or deployed position.
