Abstract (en)
[origin: WO2005106176A1] A sealing strip (L) made of plastics for sealing a window frame (4) or the like against a window intrados (5) has two sections (1, 2) joined together so as to be movable about a moulded joint (3) which extends in the longitudinal direction of the sealing strip (L). A first strip section (1) is designed for gluing to the window frame (4) and the second strip section (2) is designed to be foldable up to an opening angle (alpha) of more than 180 DEG relative to the window frame (4) or window intrados (5). In order to achieve a structure which is simple and easy to mount, the second strip section (2) is supported on the window intrados (5) by means of a spacer which contributes to the sealing effect.
