Abstract (en)

[origin: WO2005103688A1] The invention relates to a device for analyzing the coagulation and/or aggregation behavior of blood. The blood flows through an opening (9) that is disposed in a porous part (5) while a substance which influences blood aggregation can be delivered to the blood. A preliminary diffuser chamber (3) from which blood flows to the opening (9) is mounted upstream of the opening (9), and/or a secondary diffuser chamber (4) into which blood flows from the opening (9) is mounted downstream of the opening (9). The substance is arranged on the wall of the preliminary diffuser chamber (3) and/or the secondary diffuser chamber (4) in the form of a coating (8).
