Abstract (en)
[origin: WO2005109398A2] The invention relates to an instrument for controlling a piece of musical equipment. The inventive instrument comprises at least one sensor and means for the wireless transmission of a digital signal for controlling the musical equipment. The inventive instrument is characterised in that it comprises an interface for defining the sensor control law, whereby said interface can be parameterised and reconfigured using an interconnected computer device. The invention also relates to a musical system which includes a control instrument and a piece of musical equipment, said instrument comprising at least one sensor and means for the wireless transmission of a digital signal for controlling the musical equipment. The inventive system is characterised in that: (i) the instrument comprises an interface for defining the sensor control law, whereby said interface can be parameterised and reconfigured using an interconnected computer device, and (ii) the instrument also comprises means for the parameterisation of the interface.
