Abstract (en)  
[origin: WO2005104154A2] The invention relates to a switch contact arrangement (8) comprising a contact support (10a), at least two switch contacts (11), and at least one spacer (28a). The switch contacts (11) are pivotally mounted on the contact support (10a) while being respectively provided with at least one associated terminal lead (21) that encompasses a flexible section (22). In order to reduce the driving forces required for the switching movements of the switch contacts (11), the at least one spacer (28a) engages between the flexible sections (22) of adjacent switch contacts (11).
