Abstract (en)

The invention relates to a massage device for furniture for sitting or reclining, with a basic frame, a massage unit which has a drivable massage element and at least one guide profile along which the massage unit can be moved by a motor in order to carry out a massage, the guide profile having a curvature adapted to the contour of the spinal column of a person to be massaged. The guide profile is divided into three regions, wherein in the first region the massage unit enables a massage of the person located on the massage device, in the second region it acts as a lordosis support and in the third region it reaches a parked position in which the massage arrangement does not exert any pressure.
