Abstract (en)

[origin: EP1738819A1] An apparatus (I) for catalytic cleaning, particularly de-nitrification of waste gases, comprises: a heat exchanger for exchanging heat between the cleaned gas and the raw gas to be cleaned; a heating channel for supplying additional heat to the raw gas; a jetting unit for supplying ammonia; and an arrangement of catalysts, which is attached to the heating channel and is placed above the heat exchanger. An apparatus (I) for catalytic cleaning, particularly de-nitrification of waste gases, comprises: a heat exchanger for exchanging heat between the already cleaned gas and the raw gas to be cleaned; a heating channel for supplying additional heat to the raw gas; a jetting unit in the heating channel for supplying ammonia; and an arrangement of catalysts containing catalysts, which is attached to the heating channel and is placed above the heat exchanger, the arrangement of catalysts and the heating channel being connected with each other via an essentially U-shaped deflection hood, and where the heat exchanger is a heat exchanger working in counter flow.
