Abstract (en)
[origin: EP1738832A1] The shower head has an inlet side pipe connection (11) to which is connected a water outlet via a flow passage. A nozzle-like cross sectional convergence (20) is provided in the flow passage between the pipe connection and water outlet, and on the outlet side of the convergence a cross sectional divergence (22) is provided in the direction of the water outlet. The water outlet is formed by a number of outlet orifices (54) which are located on several circles concentric to the center axis of the water outlet and preferably in a plane at right angles to the direction of flow.
