Abstract (en)
[origin: EP1739040A2] The machine has carrier rollers supported on the bottom side of a casing by a supporting unit, during winding of a paper web. The supporting unit comprises of a spring, damper (8), measuring device and actuator for position controlling of the rollers, where the stiffness of the spring and damping of the dampers is passive or actively changed. An air bearing or magnet bearing is arranged on the bottom side of the rollers. An independent claim is also included for a method for winding a paper web or cardboard web in a winding machine.
