Abstract (en)

[origin: EP1739222A1] A material holding device (13) stretching an article (11) to be sewn is positioned in reference to a stitch formation device by a driving device (18). The driving device and the stitch formation device are controlled based on the detected oscillations of the article to be sewn or material holding device. An independent claim is included for device for minimizing stitching faults in embroidering device.
