Abstract (en)

[origin: EP1739235A2] The system has an oblique concrete protective wall with two stages (12,14), where a center width of upper stage is less than a center width of the lower stage. A reinforcement structure is arranged in the wall and an uprising unit (24) is provided for positioning the wall. The uprising unit is formed at a distance from the roadway and is provided as a free carrier layer, where the carrier layer does not exhibit bonding agent solidification. An independent claim is also included for an oblique concrete protective wall comprising a reinforcing bar.
