Abstract (en)

[origin: EP1739243A1] A load-bearing interconnection or splice between two end-to-end columns and a beam for a structural building column assembly, comprising: two like elongate, upright, vertically stacked and aligned next-adjacent columns including a lower column and an upper column, with each column possessing an end which confronts a like end in the other column, and with each column being formed by plural, adjacent, elongate, angle-iron-like components each having a pair of angularly-joined elongate legs, and within each column a spacer structure is interposed and secured to said angle-iron-like components intermediate, and longitudinally spaced from, the opposite ends of said components, and along the length of the column, in a manner positioning said angle-iron-like components, with each of the component's respective legs spaced from, confronting, and generally paralleling a leg in/of an adjacent component, to define a space between confronting legs adapted to receive the central web of a beam.
