Abstract (en)
[origin: EP1739257A1] The lock has an adjusting mechanism (27) with an inner interlock (26) connected with a key cylinder plunger (13) and controlling load transmission selectively to one of two pusher half nuts. A control unit is formed for selective locking of the inner interlock in a withdrawn position or for releasing the movement of the inner interlock. A catch (10) is aligned selectively in a direction or in opposite direction.
