Abstract (en)
The component has clearance cracks (3.8, 3.9) between long edges of an operation part (3.2). The crack (3.8) between a frame part (3.1) and one of the edges is greater than the crack (3.9) between the part (3.1) and the other edge, so that the part (3.2) is turned around a swiveling axis (3.6) during the actuation of the part (3.2). The axis runs through the crack (3.9) that is arranged between one of the edges and the part (3.1).
