Abstract (en)  
A damper built-in hinge provided with a hinge (20) comprising first and second hinge members (21, 22) pivotally connected with each other and a damper (30) for controlling the opening and closing of the first and second hinge members (21, 22), this damper comprising a first arm having one end pivotally supported on the first hinge member (32), a second arm (34) having one end pivotally supported on the second hinge member (22) and a damper body (41) provided between the other ends of the first and second arms (32, 34), and this damper body being adapted to generate a damper force by relative rotary movement of the first and second arms (32, 34). There is provided the damper built-in hinge adapted to be attached to hinges of various forms without any troublesome assembling of the hinge.
