Abstract (en)
The slide has a tubular profile (1) with two parallel vertical flanges (1a, 1b) connected together in an orthogonal plane by a transversal flange (1c). The flanges (1a, 1b) delimit a guiding groove (1d) for freely sliding slats constituting a rolling shutter integrated in a case. The groove has a base constituted of a removable profiled plate (2) whose profile is formed to be reversible in order to modify the width of the groove according to a positioning of the profile in one or another direction.
