Abstract (en)

The present invention relates to an industrial drier (1) for drying a piece of fabric (140). It comprises a heating chamber (100) which, in turn, comprises an air conditioning system (110). The drier further has a moving system (120) for the fabric (140) comprising at least two conveyor belts (121.b, 121.c) and means for moving (124) the conveyor belts (121.b, 121.c). The belts define a pathway (141) developing along the heating chamber (100). Each of the moving means (124.b) is dedicated to an individual conveyor belt (121.b) and is suitable to move that conveyor belt (121.b) independently of any other conveyor belt (121.c).
