Abstract (en)
[origin: WO2005105218A1] The invention relates to a fire door or a similar fire-retardant wall section, made of a door leaf element, sliding door blades or similar semi-finished products, which can be placed in a closed position in front of a passage opening and which, in a double-walled configuration, have an inner space which can be at least partially filled with a fire-retardant material. The inventive fire door is made of one or several door leaf elements, whereby said element(s), as a ready-to-install set, is (are) provided with a storage chamber, containing a fluid, in particular, a full water charge for a permanent thermal insulation.
