Abstract (en)
[origin: WO2005102531A1] Disclosed is a roller mill comprising two grinding rollers (10, 12) which can be placed against each other in such a way that a roller gap (14) is formed while being drivingly coupled to each other so as to rotate at different peripheral speeds. At least one (12) of the grinding rollers is mounted so as to be movable in a tangential direction at the roller gap (14) while being elastically preloaded in said direction in a position in which the roller gap is enlarged to a predetermined size.
