Abstract (en)

[origin: WO2005105476A1] The invention relates to a security mark, a corresponding data carrier and a corresponding method for the production of a security mark. The security mark comprises a carrier (1). In the region (5) of the carrier, transparent modifications in the volume of the carrier (1) are produced by means of an additionally added substance and a hardenable substance, enabling first information to be represented. The surface relief (7) is imprinted in at least one part of said region (5), and second information or an optically active verification element is represented by the surface relief.
