Abstract (en)

[origin: US2007168075A1] A method for the treatment of waste paper to produce a finished product in several process stages, comprises the steps of for at least one quality parameter, prescribing a set value for the finished product, wherein ahead of and/or following at least two of the process stages a value is determined by measurements of the at least one quality parameter, establishing the efficiency of a process stage with regard to the improvement of the at least one quality parameter in this process stage, and dynamically balancing in a process management system the individual process stages taking into account the overall efficiency of the process.
