Abstract (en)
[origin: WO2005106395A1] A sensor element (11), in particular for a revolution counter, has a stratified structure suitable to cause a change in magnetisation in the sensor element (11) without a power supply, simply by the displacement of a magnetic field past the sensor element (11). Moreover, the stratified structure is suitable for storing a plurality of such changes. According to the invention, the sensor element (11) has a spiral structure.
