Abstract (en)
[origin: WO2005103856A1] The invention relates to a rotary and/or pressure actuator which comprises an actuating element (4), especially a joystick (4), that is located in the center of the rotary and/or pressure actuator (2) so as to be mobile in any direction (P). Said joystick is swivelably (7) received in the rotary and/or pressure actuator (2) and positioned by means of a spring element (11, 12, 13 14) mounted between the rotary and/or pressure actuator and the adjusting element (4). Said spring element (11, 12, 13, 14) is firmly linked with the rotary and/or pressure actuator (2). The spring element (11, 12, 13, 14) is composed of at least eight tongue-shaped springs (11) that can be engaged with and disengaged from a groove (10) molded into the adjusting element (4).
